David

Software Engineer · Full-Stack Developer

Lagos, Nigeria · +234 903 929 5372 · auriontechs001@gmail.com
Open to remote roles and roles in Lagos

PROFILE

Self-taught software engineer and full-stack developer with 4 years of experience, based in Lagos, Nigeria. I take a feature from the screen a person uses, through the API, and into the database. I join teams that already have a way of working, and I learn the tools that team uses.

SKILLS

Languages. JavaScript, TypeScript, Python, PHP

Web. React, Node.js, REST APIs

Mobile. Mobile application development

Data. SQL databases

EXPERIENCE

Software Engineer / Full-Stack Developer

Eagletop3 Company Ltd · Lagos, Nigeria

Suezzi Doors Ltd · Lagos, Nigeria

4 years across both companies

- Design and ship product features across the user interface, the server, and the database.
- Build web applications with JavaScript, TypeScript, React, and Node.js.
- Write backend services in Python and PHP, including the APIs those products depend on.
- Build mobile experiences that sit alongside the web product.
- Debug production issues, keep a change small enough to review, and hand it over in a state another engineer can maintain.

HOW I WORK

- Self-taught. I learned the job by building, so I can pick up a codebase and the stack around it without a course.
- I write so a teammate can follow the decision, and I ask when a requirement is unclear instead of guessing.
- Comfortable working remotely with a team, and available for work based in Lagos.
